SUMMARY

Motivated and detail-oriented Computer Science student with practical execution experience spanning Frontend Web Development and Artificial Intelligence primitives. Adept at building high-performance Single Page Applications (SPAs) with optimized rendering patterns and clean modern component architecture, while combining responsive layouts with foundational knowledge in Generative AI architectures and machine learning systems.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript (ES6+), Java, Python, C, HTML5, CSS3, SQL
Libraries & Frameworks: React.js, React Router v6, Vite, Tailwind CSS, Streamlit, NumPy, Pandas
Tools & Concepts: UI Optimization (useMemo), Responsive Web Design, Generative AI Primitives, NLP, Git & GitHub

PROJECTS

Khoje Khatam — B.Tech Academic Resource Platform | *React, Vite, React Router v6, CSS3* [\[GitHub Repository\]](#)

- Architected a responsive Single Page Application (SPA) using React and Vite to index and serve branch-specific academic metadata, syllabus modules, and PYQs across 5 engineering disciplines.
- Optimized deep data retrieval performance using React useMemo hooks, eliminating redundant calculation layers during real-time multi-branch keyword filtering.
- Engineered flexible state routing utilizing URL query param mappings, allowing instantaneous sharing and persistent bookmarking of pre-filtered application states.

DEV_CORE — Interactive Engineering Portfolio | *React 18, TypeScript, Tailwind CSS, Vite* [\[Live Demo / Code\]](#)

- Designed and deployed a high-performance developer portfolio featuring an interactive in-browser IDE playground simulating live code execution and an integrated CLI terminal modal.
- Engineered modern responsive layouts with strict TypeScript type-safety, achieving 100/100 Lighthouse performance metrics, sub-200ms build times, and fluid cross-device ergonomics.

EXPERIENCE

AI & Generative AI Virtual Graduate Intern — Infosys Springboard Remote • May 2024 – June 2024

- Completed an advanced corporate training sequence covering Artificial Intelligence architectures, data preprocessing, and predictive evaluation matrices.
- Mastered foundational Generative AI principles, LLM prompt engineering primitives, and neural framework workflows through standardized professional evaluations.

Web Development — Self-Learner & Open Source Projects Remote • 2024 – Present

- Learned and applied core HTML5, CSS3, JavaScript, TypeScript, and React concepts by building practical web applications, modules, and responsive user interfaces.

EDUCATION

Chaibasa Engineering College (Jharkhand University of Technology, Ranchi) Sep 2023 – Aug 2027 (Expected)

Bachelor of Technology (B.Tech) in Computer Science and Engineering

- Relevant Coursework: Data Structures, Algorithms, Relational Database Management Systems (SQL), Operating Systems, Web Technologies.

Kendriya Vidyalaya, Godda (Central Board of Secondary Education) Apr 2020 – May 2022

Intermediate in Science (Physics, Chemistry, Mathematics)

CERTIFICATIONS & ACHIEVEMENTS

- Runner-Up** – College Level "Hack The Web" Hackathon (Demonstrated rapid frontend prototyping under competitive time limits).
- Web Development Intern** – CodSoft Internship Program (Executed responsive client-side web application modules).
- Certified** – Artificial Intelligence Primer & Principles of Generative AI (Double Track Credentials, Infosys Springboard).
